

Byproducts

Agriculture in the Classroom

Match the word(s) to the description.

Byproducts

Bioplastics

Biodegradable

Green Energy

Biomass

Biopower

Paper Products

Crop Waste Recycling

Comes from natural resources and is often renewable.

Made from natural sources and can be used to replace petroleum-based plastics. They are biodegradable.

When biomass is burned to create heat or electricity.

Materials left over from food production.

An example is flax straw being used in clothing and paper products.

Plant and animal materials used for energy.

Wheat straw pulp can make products such as paper, plates, toilet paper, take-out containers, etc.

Can be decomposed by bacteria or other living organisms.
